## Adjustments

The Port 10 is a price sensitive dry suit, but built to O'Three's high end and exact standards.

The Port 10 has been launched in our core sizes. We can still offer boot changes from UK size 4 to 14.

Please call for details.

Seals that require reducing in size will still be altered free of charge.

Prices and Specification correct at time of print

## Warranty

O'Three have gained a unique reputation for producing high quality individually customised dry suits and delivering customer care that is at the very core of everything we do. Within the company we are lucky enough to have a wealth of knowledge that has been made possible through a superb record of staff retention.

Using any suit commercially could reduce it's life expectancy. This is not an indication that materials and workmanship are faulty.

Every dry suit (excluding the dry zip) is guaranteed against defects in materials and workmanship for three years. In the unlikely event that you do experience a problem during that period, if after inspection O'Three are satisfied that a product is defective, and taking into account what they regard as fair wear and tear from the natural life of the dry suit, they will repair or replace it free of charge.

### In Plain Terms:

In this day and age of lawsuits and litigation, O'Three prides itself on its "no nonsense, no hassle" after sales service – which we are told is second to none.

O'Three has been able to develop this side of its business because of the mutual trust it develops with its customers.

PACKED WITH  
FEATURES

An entry level suit packed with quality and features.

Material and seam integrity is where O'Three starts with all its dry suits. Using the same high end components and our super supple neoprene seals, the Port 10 is equipped to withstand the rigors of commercial diving, whilst appealing to the newly qualified diver.

an entry level suit,  
packed with features.

#### New to dry suits - Entry Level

As you will realise when reading through this brochure, the Port 10 was built with the commercial diver very much in mind. This pedigree and build specification will ensure you get a dry suit that will perform and give you value for money as you begin your dry suit journey and beyond.

#### Commercial Diver - Time is money

As with every aspect of commercial life 'time is money' and when the majority of that time is being spent underwater the ability to control cost is made all the more difficult. Robust and reliable equipment are a pre-requisite of any professional organisation.

The Port 10 is equipped to deal with a wide selection of commercial diving. However, a multitude of customisation / reinforcement options specific to a particular type of job can be carried out to any O'Three dry suit. Please call and we will be happy to discuss all options and quote accordingly.

The Port 10, a neoprene dry suit that offers a good degree of built in insulation and buoyancy creating a comfortable user friendly suit that can be worn for long periods of time.

## 10 Key Features

- 4.5mm Dive Grade Neoprene
- Armatex lined externally
- BDM Medium Duty Zip
- Sandwich zip construction
- External zip guard.

- Jollop wrist seal lube
- Bees Wax
- Zip Slip

### Customising your Port 10

These standard options are available at additional cost.

- P-Zip
- P-Valve
- Pockets
- Elbow Pads
- Boot Options
- Valve Options
- Hood Attached
- Internal Braces

If there is anything that you would like, but is not mentioned above, please call.

comfortable to,  
wear all day.

## More insulation, with less bulk.

The Port 10, used in conjunction with O'Three's PBB+ base layer make it possible for O'Three to produce a dry suit that will fit you well throughout the entire year.

For most people, under most conditions, the under suit / base layer combinations mentioned above will be perfect. However, new techniques and re-breathers are enabling divers to push their dive times way beyond what was once the norm.

Internal thermal insulation for dry suits, we feel, is one of the most misunderstood elements of dry suit diving. It is fundamental for divers to understand thermal layering, its buoyancy implications, the impact on how your dry suit will fit and how that could hinder your movement.

If you get it wrong, it could lead to a whole bunch of issues that could take you down a path that will incur unnecessary cost and will make your diving less enjoyable.

If you get it right, it could enhance your whole dry suit diving experience.

If more insulation is required, think thin, breathable and add to your existing undersuit.
